

Treating Chronic Pain: "Making The Impossible ...Possible"

Cornwall is home to a world-class therapy clinic that specializes in treating chronic pain conditions that healthcare professionals may find difficult to resolve.

Innovative Therapy Canada is one such clinic, with a rather unique ability to diagnose and treat chronic pain.

You might be surprised to learn that one of the reasons for the clinic's successes comes from its' owner, who happens to be blind.

Glenn Cameron has developed a rare sense of touch that allows him to feel problems that even the best imaging equipment like MRI's can't detect.

Cameron has achieved a level of success

that many sighted health care professionals never reach.

He uses this sense to diagnose pain conditions with extreme accuracy and then develops a detailed plan to reverse the painful effects of the condition and, more importantly, fix the cause of it as well.

Since graduating as a Therapist, Cameron never adopted the attitude that he knew everything there was to know about medicine and therapy. Rather- he has been relentless in his pursuit of knowledge, seeking out some of the most advanced courses and seminars the medical world has to offer.

He desperately wants to know when research offers new insight, tools, technologies, and techniques to solve issues not thought possible before now and make them available locally. He has equipped his

Cornwall clinic with the very best therapeutic tools and technologies available today, to help those who suffer from conditions that have been deemed impossible to solve.

This was clearly evident in January, 2018 when a 48 year old nurse from Nova Scotia came to see Glenn for answers as to why she has lived with severe chronic pain and been

unable to work for 14 years. Her story is one of intense suffering that should never have happened in the first place.

Injured in a car accident in 2004, Lisa broke no bones or suffered no internal organ damage. Yet she never felt the pain from the accident ever leave her body.

The list of health care professionals she saw over years covered the spectrum from massage therapy and physiotherapists, chiropractors, acupuncture, hypnosis and the top pain specialists in Nova Scotia and New Brunswick that medicine has to offer.

None of the dozen or more health care professionals she went to could offer her any insight into the source of all her pain, let alone resolve it. Her life slowly faded over years, to a point where she wondered why she was still alive. She never gave up hope of finding an answer. "Glenn saved my life!"

Lisa met Cameron earlier this year and that meeting changed her future. He was able to finally find the issues that caused so much pain for the past 14 years.

Once treatments were completed, she returned home to Nova Scotia with a new quest for life, and to make the transition from a life of chronic pain, to one of returning to nursing work-her calling.

Lisa plans to soon begin helping others just like her- so they do not have to suffer as she did.

Cameron cannot explain his relentless thirst for knowledge or private-investigator like drive to find everyone's true Cause and not just Symptoms, of pain.

"Perhaps it's my blindness that gives me the fight, wanting to achieve a level of success many sighted people never reach, so I don't think I have a disability".

Whatever it is, those who seek help from Cameron will likely see results and join the list of many who are stunned with his abilities to both diagnose and treat pain conditions that historically seem impossible to resolve.

"Pain is the body's way of telling us we have a problem. Assuming it is a normal expectation for our age, or that we are not at all fixable is crazy", says Cameron.

"This is 2018, not 1918, so most problems that don't kill us are actually solvable". Glenn Cameron is determined to do just that.

Perhaps Innovative Therapy Canada can help you. 'Make the Impossible...Possible'.
